MODULE 11 · CHECKLIST

Pre-deploy QA checklist

States, breakpoints, keyboard nav, and tokens — verify before it ships, not after.

Side by side with Figma

- [ ] **Open the Figma prototype and the live URL together**
  Browser split view works well.

States

- [ ] **Hover, focus, active**
  Every interactive element.
- [ ] **Disabled and loading**
  Truly disabled, not just styled disabled.
- [ ] **Error, empty and long-content states**
  Reachable and designed.

Breakpoints

- [ ] **375px (iPhone SE)**
  No horizontal scroll; tap targets ≥ 44×44px.
- [ ] **768px (iPad)**
  Layout shifts as specified.
- [ ] **1440px (desktop)**
  Max-width and grid as specified.
- [ ] **Safari and Chrome**
  Some CSS renders differently.

Keyboard & accessibility

- [ ] **Tab through the whole page**
  Logical order, nothing skipped, no keyboard traps.
- [ ] **Focus ring always visible**
  Never `outline: none` without a replacement.

- [ ] **Contrast meets WCAG 2.2 AA**
  4.5:1 for text, 3:1 for UI components.
- [ ] **Storybook a11y addon clean**
  Zero Critical / Serious violations.

Tokens & fidelity

- [ ] **Colors match tokens**
  Inspect computed values in DevTools.
- [ ] **Spacing matches the spec**
  Padding, gaps and margins — the 4px error you'll notice later.
- [ ] **Font size, weight and line height**
  These drift the most.

Ship it

- [ ] **Every discrepancy logged with a precise fix prompt**
  Computed value, expected value, screenshot of both.
- [ ] **Deployed URL opens and works for someone else**
  Share the link with one person before you call it done.
